# (Very short) Introduction to PCA

## Component 1

## Component 2

# (Very short) Introduction to PCA

Total variance of the dataset

# (Very short) Introduction to PCA

**Component 1**  
(40% variance explained)

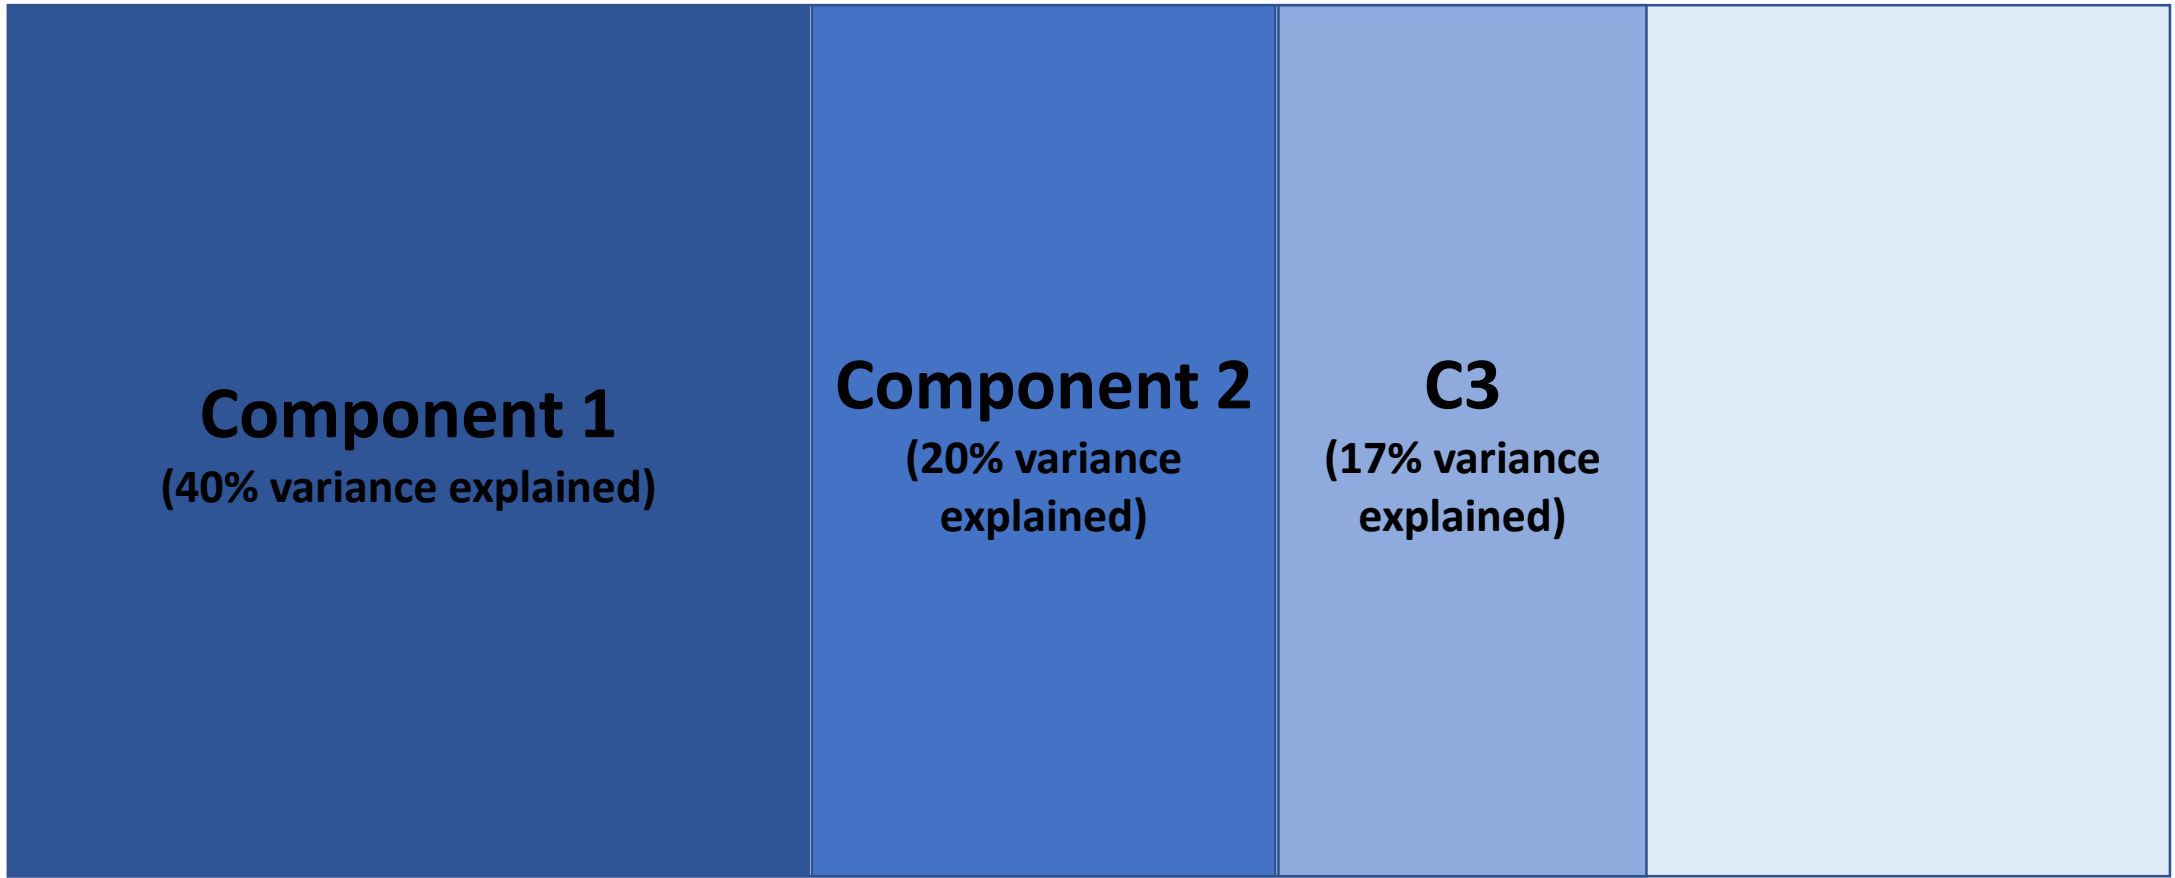

# (Very short) Introduction to PCA

# (Very short) Introduction to PCA

# (Very short) Introduction to PCA

# Why PCA?

REDUCES MODELING TIME

GROUPS CORRELATED  
FEATURES

EXTRACTS MEANINGFUL  
COMPONENTS ON  
QUESTIONNAIRES

ANOMALY DETECTION

# Constraints

Missing values not allowed in dataset

All features must be scaled / normalized

## Dataset:

- Humor Styles Questionnaire (<http://www.humorstyles.com/>)
- 1071 participants on 32 questions

# R Example

## Dataset:

- Humor Styles Questionnaire (<http://www.humorstyles.com/>)
- 1071 participants on 32 questions

Totally  
Disagree

Totally  
Agree

# R Example

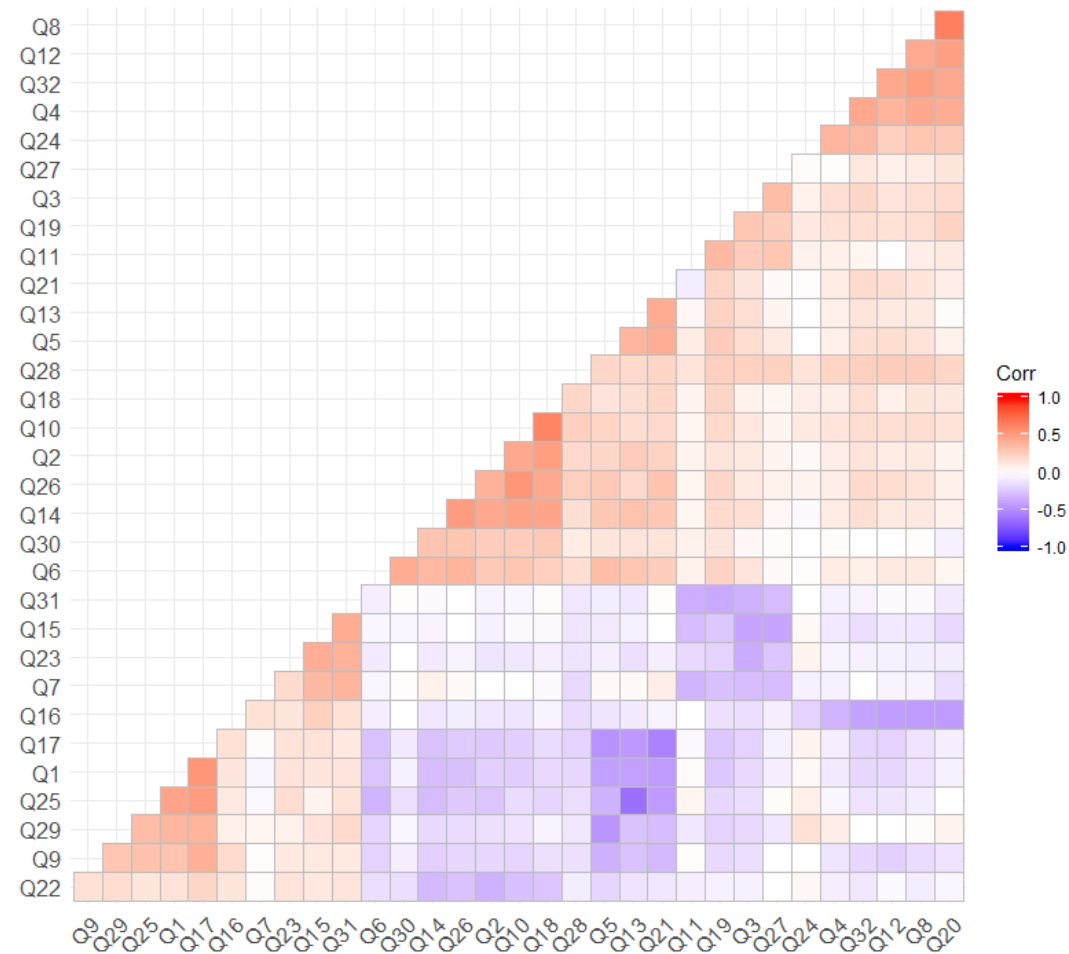

## Libraries:

- FactoMineR
- factoextra
- psych

# R Example

```
correlations <- cor(humor_df[, 1:32])  
ggcorrplot(correlations, hc.order = TRUE, type = "lower")
```

## R Example

```
pca_solution <- PCA(humor_df[, 1:32], graph = F)
pca_solution$eig[1:10,]
```

	eigenvalue	percentage of variance	cumulative percentage of variance
comp 1	6.4251214	20.078504	20.07850
comp 2	3.3496777	10.467743	30.54625
comp 3	2.7803371	8.688553	39.23480
comp 4	2.2007916	6.877474	46.11227
comp 5	1.2658822	3.955882	50.06816
comp 6	1.0430514	3.259536	53.32769
comp 7	1.0291327	3.216040	56.54373
comp 8	0.9298411	2.905753	59.44948
comp 9	0.8310916	2.597161	62.04665
comp 10	0.7873079	2.460337	64.50698

# R Example

```
fviz_screepplot(pca_solution, choice="eigenvalue", ncp=10)
```

## R Example

```
fa.parallel(correlations, n.obs = nrow(humor_df), fa='pc')
```

# R Example

`pca_solution$var$contrib`
